TURBO · OWNER'S GUIDE

Your WhatsApp bot: what's new and where to find your settings

What changed this week, what your customers see today, the one step left for you, and where everything lives in your TURBO console.

Console **turbo-gh.vercel.app** WhatsApp **+233 50 206 3549** Updated **15 October 2026**

LIVE NOW

- Customers who hide their number are answered and confirmed by SMS code.
- Customers can send any place as a location pin.
- New fares: GHS 25 / 35 / 50 pay-as-you-go, GHS 16 / 25 / 40 package.
- The package is a GHS 960 balance.

WAITING ON YOU

- Fares are measured from the customer's pickup until you enter the Student Plaza location.
- Once it is entered, the bot asks for the destination first and prices from the Plaza.

YOUR TO-DO

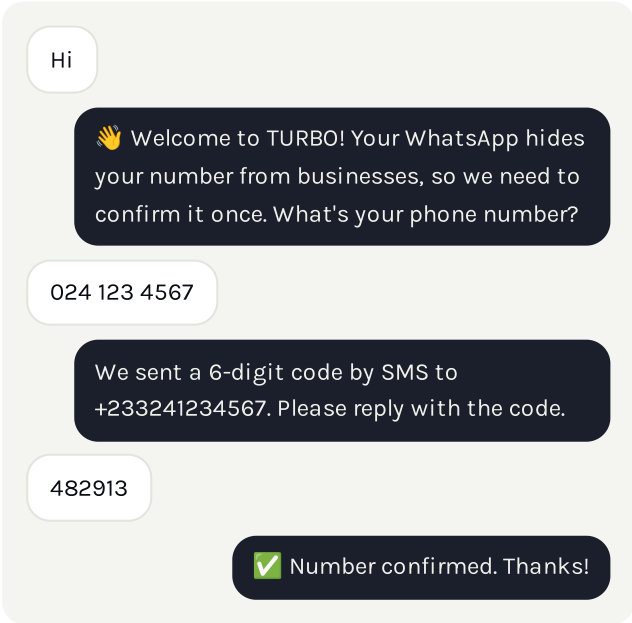

- Enter the Student Plaza location in Settings → Fare reference point.
- Check the Inbox daily.
- Add your most-asked-for places.

Working now LIVE

Customers who hide their number on WhatsApp

WhatsApp now lets people use a username and hide their phone number from businesses. The bot used to stay silent with them. Now it asks for their number, texts them a code, and once they reply with it, carries on into the normal TURBO menu.

- The code arrives as an SMS from **Bookly**.
- It expires after 10 minutes. A customer gets 5 tries per code and up to 3 codes.
- Typing a number is not enough. Only the person holding that phone can open or use its TURBO account and ride balance.
- If the SMS can't be sent, the chat is passed to your team in the Inbox.

Example conversation

When the destination is not on your list

The bot shows your saved Destinations as a numbered list. For anywhere else, the customer sends the place as a location pin and the bot prices the trip from it.

- A typed place name only works if it matches a saved Destination. The bot has no map search.
- After 3 places it can't find, the bot passes the customer to your team in the Inbox.
- When the bot can't find a typed place, its reply now includes the pin steps below.

How a customer sends a place as a pin

1. In the chat, tap 📎 (Android) or **+** (iPhone).
2. Choose **Location**.
3. Search for the place, for example "Accra Mall".
4. Tap it to send.

Works for any place, not only where they are standing.

Taking over a chat, and giving it back

Open `Inbox` and pick the conversation. **Take over** stops the bot so you can reply yourself. **Hand back to bot** lets the bot carry on with that customer. Chats the bot passes to your team wait here until someone does one of the two.

Text messages (SMS)

Number codes, and driver texts if you switch them on, arrive from **Bookly**. You don't need your own SMS account. Bookly sends up to **200 texts a month** for TURBO; if you expect more, ask Bookly to raise the limit. When the limit is reached, customers who need a code are passed to your team instead.

Where to find your settings

Everything below is in the TURBO console menu. Only the owner account can change settings.

WHERE	WHAT YOU CAN CHANGE
`Settings → Fare reference point`	The exact position of Central University Student Plaza (name, latitude, longitude). Fares are measured from here. While empty, fares are measured from the customer's pickup.
`Settings → Founding package`	Price, which is also the ride credit (GHS 960), how many days it lasts, how many packages are on sale, the fare for each distance band, and the fare for trips over 10 km.
`Settings → Pay as you go`	Switch it on or off, the daily limit of rides, the fare for each distance band, and the fare over 10 km. Switch off "Offer longer trips" to stop taking trips beyond 10 km.
`Settings → Distance and driver texts`	The road factor used to estimate distance, and whether drivers get an SMS when a ride is assigned.
`Settings → Destinations`	Your saved places: name, map position (latitude, longitude), order in the list, and on/off.

WHERE	WHAT YOU CAN CHANGE
`Settings → Drivers`	Your drivers and their phone numbers.
`Channels`	WhatsApp, Instagram and Messenger connections. Your WhatsApp is connected.
`Inbox`	All customer chats, with Take over and Hand back to bot.
`Dispatch` · `Rides`	Assign drivers and follow each ride from request to completion.
`Customers` · `Payments`	Each customer's package and history, and every payment received.

New pricing from your brief LIVE

Based on your brief "App Flow & Fare Calculation". **One step is left for you:** enter the Student Plaza location in `Settings → Fare reference point`. Until then, distances are measured from the customer's pickup point and the bot asks for the pickup first.

Fares measured from Central University Student Plaza

Distance is measured from the Student Plaza to where the customer is going. The driver's location is never used, and customers can still be picked up anywhere.

DISTANCE FROM STUDENT PLAZA	PAY AS YOU GO	FOUNDING PACKAGE
0 to 6 km	**GHS 25**	**GHS 16**
Over 6 km, up to 10 km	**GHS 35**	**GHS 25**
Over 10 km, any distance	**GHS 50**	**GHS 40**

Exactly 6.00 km counts in the first band and exactly 10.00 km in the second.

The package is a GHS 960 balance

- Buying the package gives GHS 960 of ride credit, shown in GHS everywhere.
- Each trip's fare comes off the balance only when the ride is completed. Cancelled rides cost nothing.
- Package holders can travel any distance.
- Balance lower than the fare: the customer uses what's left and pays the rest by payment link. Under GHS 2 is waived.
- At GHS 0 the bot offers a pay-as-you-go ride.

A shorter way to book

Once the Plaza location is entered, the bot asks where the customer is going, shows the price straight away, then asks for their pickup location so the driver can find them.

Every ride record keeps the distance used for pricing, the fare band, the amount charged or deducted, and the balance left afterwards.

What we need from you

1. **The exact location of Central University Student Plaza.** In Google Maps, press and hold on the Plaza until a red pin drops, then copy the two numbers shown (for example 5.71234, 0.10567). Enter them in Settings → Fare reference point and press Save. Every fare depends on this point, so make sure it is the Plaza itself.
2. **Check the Inbox every day.** Chats the bot passes to your team wait there until someone replies or hands them back.
3. **Add your most-asked-for places** under Settings → Destinations, so customers can pick them by number.
